DATE: / /2025

CERTIFICATE

TO WHOM SO EVER IT MAY CONCERN

This is to certify that, **MISS. KOMAL DEVIDAS PUNDE** a student of **M.C.A. Sem. IV**
Seat No....., has successfully completed, **his/her** academic project in the Institute
**"AKOLE TALUKA EDUCATION SOCIETY'S AGASTI INSTITUTE OF MANAGEMENT, COMPUTER
APPLICATION AND RESEARCH (AIMCAR) AKOLE"** from
Dec 2024 to Apr 2025.

He/ She has submitted the project report entitled on **"ART GALLERY MANAGEMENT SYSTEM"**
in the fulfillment of the requirement of **MASTER OF COMPUTER APPLICATION (MCA)** degree
course, affiliated to the **SAVITRIBAI PHULE PUNE UNIVERSITY, PUNE.**

We wish **him/ her** all the best for his future endeavors.

PROF. RUTUJA B. BHANGARE

PROJECT GUIDE

(Internal Examiner)

DR. PRASHANT R. TAMBE

TO WHOM IT MAY CONCERN

This is to certify that **Ms.Komal Punde**, a student of **MCA (Master of Computer Applications)** from **Agasti institute of management, computer application and research (AIMCAR) Akole**, has successfully completed her internship at **TechnoHacks Solutions Pvt. Ltd.** as a **Full Stack Development Intern**.

During the internship period, from **15/12/2024 to 15/04/2025**, she contributed to the development of a project titled "**Art gallery management system Language used-php**" as part of our development team.

She demonstrated a positive attitude, worked well in a team environment, and completed the assigned tasks efficiently and on time, maintaining good quality standards.

We appreciate her efforts and wish her great success in her future endeavors.

Warm Regards,

Sandip Gavir
Director
TechnoHacks Solutions Pvt. Ltd.
www.technohacks.co.in

DECLARATION

I, hereby declare that, the research work presented in the **Project Report** entitled “**ART GALLERY MANAGEMENT SYSTEM**” submitted for the award of the Degree of **Master In Computer Application** under the faculty **Commerce and Management** of **Savitribai Phule Pune University, Pune** is an outcome of my own efforts and a genuine research work done under the guidance of **PROF. RUTUJA B. BHANGARE**. I also declare that, this Project Report or any part therein has not been previously submitted by me for the award of any Degree, Diploma, Associateship, Fellowship or Titles in this or any other University or any other Institution of Higher Learning.

I, further declare that the material obtained from other sources has been duly acknowledged.

Place: Akole

Miss. Komal devidas punde

Date : __ / __ / 2025

Name of student

ACKNOWLEDGEMENT

This project report is a fruitful outcome of experiences, challenges, and relationships involving many great people to whom I am more indebted than I can possibly acknowledge. Some of them, however, deserve special thanks. I take this opportunity with much pleasure to thank all, who directly and indirectly contributed, helped me for this Project.

*I, take this opportunity to express my deep sense of gratitude and indebtedness to my research guide **Prof. Rutuja B. Bhangare**. for his keen interest, dynamic guidance and constant encouragement.*

*I, express deep sense of gratitude to **Dr. Prashant Radhakrishna Tambe, Director - AIMCAR, Akole** for his continuous encouragement and support to complete this Project Report.*

I, owe sincere thanks to Prof. Amol B. Nawale, Prof. Sanket C. Dhawale, Prof. Pravin S. pawade. for their stimulating support to complete this Project Report.

Place : Akole

Date : __ / __ /2025

Miss. Komal Devidas Punde

CHAPTER NO. 1

INTRODUCTION

INTRODUCTION

The **Art Gallery Management System** has been designed to override the problem of existing manual system. This web application is supported to eliminate and in some case reduce the hardship faced by manual system. The application is reduced as much as possible to avoid errors while entering the data. Its also provide message while entering invalid data. No formal knowledge is required for the user to operate this system. Overall we said that Art Gallery Management System is user friendly.

In Art Gallery Management System we use PHP and MySQL Database. This project keeps the records of user enquiry, art products and art artist. Art Gallery Management System has two module i.e. admin and user.

Admin Module

1. **Dashboard:** In this section, admin can briefly view the total number of artist, total answer enquiry, total unanswered enquiry, Total Art Type, total art medium and total art products.
2. **Art Type:** In this section, admin can manage art type (add/delete/update).
3. **Art Medium:** In this section, admin can manage art medium(add/update/delete).
4. **Art Product:** In this section, admin can manage art products(add/update/delete).
5. **Enquiry:** In this section, admin can view and maintain the enquiry.
6. **Search Enquiry:** In this section admin, can search enquiry with the help of enquiry number.
7. **Page:** In this section, admin can manage about us and contact us pages.

User Module

1. **Home:** It is a welcome page for users.
2. **About:** It is a about us page of website.
3. **Art Type:** In this section, users can view art products according to art type and sent enquiry for art products.
4. **Contact:** In this section, users can view contact us details.

1.2 Company Profile

TECHNOHACKS SOLUTION PVT.LTD

Here's some information about **Technohacks Solutions Private Limited**, based in Nashik, Maharashtra:

Company Overview:

- Technohacks Solutions Private Limited is a private company incorporated on **May 6, 2024**.
- It is classified as a non-government company and is registered under the Registrar of Companies, Mumbai.
- The company specializes in **computer programming, consultancy, and related activities**.

Corporate Details:

- **Corporate Identification Number (CIN):** U62099MH2024PTC424756.
- **Authorized Share Capital:** ₹1,00,000.
- **Paid-up Capital:** ₹1,00,000.

Registered Address:

- F-10 Devikrupa Apartment, Plot-5, Gangapur Road, HPT College, Nashik, Maharashtra, 422005.

Key Management:

- The company has two directors: **Sandip Shivaji Gavit** and **Puja Laxman Rasal**.

Contact Information:

- Email: info@technohacks.co.in.

1.3 Client Profile

Personal Information

1. **Name:** Mr. Rajesh Sharma
2. **Contact Number:** +91 9876543210
3. **Email Address:** rajesh.artgallery@gmail.com

Business Information

1. **Business Name:** Sharma's Art Gallery
2. **Location/Address:** 123, MG Road, Nashik, Maharashtra, India
3. **Gallery Website:** www.sharmasartgallery.com
4. **Business Type:** Contemporary and Modern Art

Project Details

1. **Preferred Art Styles:** Abstract, Portraits, Landscape
2. **Art Medium Preferences:** Oil Paints, Acrylics, Sculptures
3. **Gallery Size and Capacity:** 3,000 sq. ft., displays 150 pieces.
4. **Existing System Details:** Manual management of inventory and inquiries.
5. **Specific Features Required:**
 - Centralized inventory tracking.
 - Online artist profile display.
 - Visitor inquiry management.

Technical Preferences

1. **Supported Platforms:** Laptop browsers and Mobile browsers.
2. **Budget Range:** ₹2,50,000 - ₹3,50,000
3. **Project Deadline:** 4 months

Other Notes

1. **Special Requests or Customizations:** Integration with social media platforms for showcasing featured art pieces.
2. **Additional Comments:** Client prefers a clean, minimalistic design for the interface.

1.3 Institute Profile

Agasti Institute of Management Computer Application and Research s is an Institute with a belief that "Be the Change, you want to see in the world." we want to be a dynamic knowledge Hub through which we can transform rural & agricultural background students into Self-dependent Professionals& Entrepreneurs who will become the Change in the Society, generate employment & truly build The Unnat Bharat.

To bring professional education in the reach of rural & tribal students To enrich the students by providing skills required Help to prepared educational professional recognized for the quality and significance of there teaching research scholarship service outreach and leadership Provide widely recognized leadership in the improvement of teaching learning and the assessment of educational outcomes across The lifespan through research managerial process scholarship and technology Provide leadership in the development of collaborative professional relationship with faculties organizations and other institutions focused on the improvement of education in faculties communities and work place settings to tune up with contemporary dynamic needs. To become a Pioneer to bridge the gap between India & Bharat. To empower students, Faculty & Society for contributing in overall progression of our Nation.

1.4 Abstract

The aim of ‘**Art Gallery Management System**’ is to automate its existing manual system by the help of computerized equipment and full-fledge computer software, fulfilling their requirements so that their valuable data can be stored for a longer period with easy accessing and manipulation of the same. Basically the project describes how to handle good performance and provide better services to clients. This project can lead to error free, secure, reliable and fast management system. This system will help the organization in better utilization of resources.

The **Art Gallery Management System** is a web-based application designed to address the limitations of traditional manual systems for managing art galleries. Built using PHP and MySQL database technologies, this system ensures seamless data management, reduces errors, and enhances user accessibility without requiring formal technical knowledge. The system comprises two distinct modules: **Admin** and **User**, catering to the operational and user engagement aspects of the gallery.

The **Admin Module** enables efficient management of art types, mediums, and products, while handling user inquiries and updating website content. Admins can access key metrics like the total number of artists, answered/unanswered inquiries, and art inventory through a dashboard. The module also provides functionalities to search inquiries, manage the “About Us” and “Contact Us” pages, and streamline gallery operations.

The **User Module** delivers a user-friendly interface, allowing visitors to explore art types, view gallery information, and submit inquiries. The application fosters interaction between users and the gallery, making the exploration of art more engaging and accessible.

This project emphasizes error reduction, user-friendliness, and effective management. By transitioning to a digital system, galleries can enhance their operations and provide a better experience for users. Overall, the Art Gallery Management System offers an innovative solution to modernize and streamline art gallery management processes.

1.5 Existing System and Need for System

Existing System

Currently, many art galleries operate using a manual system for managing their operations. This involves maintaining physical records or using basic tools like spreadsheets to track art inventory, artist information, and user inquiries. While such methods may suffice for smaller galleries, they are prone to several challenges:

1. **Error-Prone Processes:** Manual data entry and record-keeping are susceptible to inaccuracies and errors.
2. **Inefficient Operations:** Searching for specific information, such as inquiries or inventory details, can be time-consuming.
3. **Poor Accessibility:** Information is not readily available for users or staff, especially when records are stored physically.
4. **Limited User Interaction:** Manual systems do not allow real-time engagement with users, such as inquiry submissions or product exploration.
5. **Data Security Issues:** Physical records are at risk of loss or damage, and there's no reliable backup system.
6. **Scalability:** As the gallery grows, manual systems become increasingly difficult to manage.

Need for the System

To overcome these challenges, there is a pressing need for a digital solution like the **Art Gallery Management System**. This system aims to:

1. **Enhance Efficiency:** Automate operations, such as inventory tracking, inquiry handling, and artist management, to reduce manual effort and save time.
2. **Improve Data Accuracy:** Minimize errors in data entry and management by using a structured database system.
3. **Streamline User Interaction:** Provide users with an intuitive interface to explore art products, submit inquiries, and access information in real-time.
4. **Centralize Information:** Store all records, such as artist details, art types, and inquiries, in a centralized, secure database.
5. **Increase Accessibility:** Ensure that information is easily accessible for both administrators and users from any device with internet connectivity.
6. **Boost Scalability:** Offer a system that can adapt to the gallery's growth and future needs, such as handling larger inventories or more user inquiries.

1.6 Scope of System

Scope of the System

The Art Gallery Management System is designed to streamline gallery operations and enhance user engagement through a digital platform. Its scope includes:

1. Comprehensive Data Management:

- Centralized storage and retrieval of art products, art types, mediums, and artist information.
- Efficient handling of user inquiries and communication records.

2. Automated Administrative Tasks:

- Simplification of operations like adding, updating, and deleting art types, mediums, and products.
- Real-time tracking of inquiries and maintaining their statuses.

3. User-Friendly Interaction:

- Visitors can easily explore art products based on type or medium.
- Simple navigation to contact gallery administrators and view artist profiles.

4. Error Reduction:

- Validation mechanisms to minimize errors during data entry and inquiries.
- Notifications to prevent the submission of invalid or incomplete data.

5. Accessibility:

- The system is accessible via web browsers, allowing users and admins to connect remotely.
- Ensures smooth interaction for users without requiring technical expertise.

6. Scalability:

- Designed to adapt to increasing gallery inventory, user inquiries, and future expansion.

7. Enhanced Reporting:

- The admin dashboard provides summarized data, such as total inquiries, artist counts, and product information, enabling informed decision-making.

8. Security and Backup:

- User and admin data are securely stored with regular backup features to prevent data loss.

1.7 Operation Environment

Hardware Requirement:

Client Side:

RAM	512 MB
Hard disk	10GB
Processor	1.0GHz

Server Side:

RAM	1GB
Hard disk	20GB
Processor	2.0GHz

Software Requirement:

Client Side:

Web Browser	Google Chrome and any compatible browser
Operating System	Windows7 and any equivalent OS

Server Side:

Web Server	APACHE
Server side Language	PHP5.6 or above version
Database Server	MYSQL
Web Browser	Google Chrome and any compatible browser
Operating System	Windows7 and any equivalent OS

1.8 Brief Description of Technology Used

☐ **Programming Language:**

- The project is developed using **PHP**, a server-side scripting language that is efficient for building dynamic and interactive web applications.

☐ **Database Management System:**

- The project utilizes **MySQL**, a relational database management system (RDBMS), for storing, retrieving, and managing all data related to users, artists, art products, and inquiries.

☐ **Front-End Technologies:**

- The user interface (UI) is built using **HTML**, **CSS**, and **JavaScript** to ensure a responsive and user-friendly design.

☐ **Frameworks/Libraries:**

- Optional frameworks like **Bootstrap** (for UI design) and **jQuery** (for enhanced interactivity) may be used.

☐ **Server:**

- The application is hosted on a **web server** such as Apache or Nginx.

☐ **Validation and Error Handling:**

- Error reduction is ensured through **form validation** techniques using both server-side (PHP) and client-side (JavaScript) scripting.

☐ **Platform Support:**

- The system is **cross-platform compatible**, designed to work on various operating systems and modern web browsers.

1.8.1 Operating Systems Used (Windows/ Unix)

□ The **Art Gallery Management System** is designed to function seamlessly on both **Windows** and **Unix-based operating systems**, ensuring compatibility and flexibility for

diverse user environments.

- **Windows:** Suitable for desktops, laptops, and local hosting environments.
- **Unix:** Popular for web server hosting due to its stability, reliability, and security features.

1.8.2 RDBMS is used build database(MySQL)

- **Relational Database Management System (RDBMS):** MySQL is used to build and manage the database. MySQL is chosen for its efficiency in handling structured data, security features, and wide community support.
- **Database Structure:**
 - **Art Products:** Stores details like name, type, medium, and price.
 - **Artist Profiles:** Maintains artist information, including personal details and associated artworks.
 - **User Inquiries:** Tracks all inquiries submitted by visitors.

APACHE

The Apache HTTP Server Project is an effort to develop and maintain an open-source HTTP server for modern operating systems including UNIX and Windows. The goal of this project is to provide a secure, efficient and extensible server that provides HTTP services in sync with the current HTTP standards.

The Apache HTTP Server ("httpd") was launched in 1995 and it has been the most popular web server on the Internet since April 1996. It has celebrated its 20th birthday as a project in February 2015.

PHP

- PHP stands for PHP: Hypertext Preprocessor.
- PHP is a server-side scripting language, like ASP.
- PHP scripts are executed on the server.
- PHP supports many databases (MYSQL, Informix, Oracle, Sybase, Solid, Generic ODBC, etc.).
- PHP is an open source software .
- PHP is free to download and use.

MYSQL

- MYSQL is a database server
- MYSQL is ideal for both small and large applications
- MYSQL supports standard SQL
- MYSQL compiles on a number of platforms
- MYSQL is free to download and use

How to access MySQL: <http://localhost/phpmyadmin>

JavaScript:

JavaScript is a new scripting language for WebPages. Scripts written with java script can be embedded into your HTML pages. With java script you have many possibilities for enhancing your HTML page with interesting elements. For example you are able to respond to user-initiated events quite easily. Some effects that are now possible with java script were some time ago only possible with CGI. So you can create really sophisticated pages with the helps of java script on the Internet.

Difference between java and Java Script :

Although the names are almost the same Java is not the same as Java Script. These are two different techniques for Internet programming. Java is programming language. JavaScript is a scripting language as the name implies. The difference is that we can create real programs with java. But java script is not real programming. Java Script is meant to be easy to understand and easy to use. JavaScript authors should not have to care too much about programming. We could say that Java Script is rather an extension to HTML than a separate computer language. Of course this is not the official definition but it makes it easier to understand the difference between java and java script.

How can Java Script scripts run?

The first browser to support java script was the Netscape Navigator 2.0 of course the higher versions do have java script as well. You might know that java does not run on all Netscape Navigators 2.0 (or higher versions) versions. But this is not true for java script -although there are some problems with the different versions.

The Mac version for example seems to have many bugs. In the near future there are going to be some other browsers, which support java script. The Microsoft Internet explorer 3.0 is going to support java script. JavaScript enabled browsers are going to spread soon - it is worth learning this new technique now. You might

realize that is really easy to write Java Script scripts. We have to know is some basic techniques and some work-around for problems you might encounter. Of course we need a basic. Understanding HTML before reading this tutorial you can find many really good online resources about HTML.

Best you make an online search about 'html' at yahoo if you want to get informed about HTML. Now I want to show some small scripts so you can learn how they are implemented into HTML-documents and to show which possibilities you have with the new scripting language. The following is a very small script, which will only print a text into an HTML document.

```
<html>
```

```
<head>
```

```
My first JavaScript
```

```
</head>
```

```
<body><br>
```

```
This is a normal HTML document
```

```
<br>
```

```
<script language="JavaScript">
```

```
Document.write ("this is a java script")
```

```
</script><b r>
```

```
Backing HTML again
```

```
</body>
```

```
</html>
```

CHAPTER NO. 2

Proposed System

Proposed System

The proposed **Art Gallery Management System** is a web-based platform designed to address the limitations of existing manual processes in art galleries. It provides a centralized, efficient, and user-friendly solution for managing gallery operations and improving user interactions. The system ensures enhanced functionality, reduced errors, and seamless management of art products, inquiries, and artist information.

Features and Capabilities of the Proposed System:

1. Admin Module:

- **Dashboard:** A comprehensive overview of key metrics, such as the total number of artists, inquiries (answered/unanswered), art types, mediums, and art products.
- **Art Type Management:** Capability to add, update, and delete various art types.
- **Art Medium Management:** Admins can manage art mediums with ease.
- **Art Products Management:** Enables the addition, editing, and removal of art pieces in the gallery's inventory.
- **Inquiry Handling:** Facilitates viewing, answering, and managing user inquiries.
- **Search Functionality:** Inquiry search is streamlined using unique inquiry numbers.
- **Page Management:** Admins can edit content for the "About Us" and "Contact Us" pages.

User Module:

- **Home Page:** A welcoming interface for users to access the system.
- **About Us:** Displays information about the gallery.
- **Art Types:** Users can explore products based on specific art types and submit inquiries for them.
- **Contact Us:** Provides gallery contact information for user convenience.

2.1 Study of Similar System

To understand the scope and functionality of the **Art Gallery Management System**, it is essential to study similar systems that have been implemented in the industry. Here are some examples of existing systems and their features:

Artlogic:

- A comprehensive art gallery management software that helps galleries manage inventory, contacts, CRM, marketing, and accounts.
- Features include powerful offer creation tools, analytics, and seamless organization

Masterpiece Manager:

- Designed for artists, galleries, and collectors, this software offers inventory management, customer relationship tools, and sales tracking.
- It is known for its user-friendly interface and robust functionality.

Artwork Archive:

- A platform for managing art collections, tracking sales, and maintaining client relationships.
- Offers invoicing, inventory management, and reporting tools.

ArtBinder:

- Focuses on presenting artworks remotely and securely.
- Includes features for inventory tracking, client management, and virtual gallery creation

Blackbaud Altru:

- A specialized solution for galleries and museums, providing tools for managing memberships, ticketing, events, and fundraising.
- Enhances visitor engagement and operational efficiency

Research Papers :

If you require research papers related to art gallery management systems, you can explore academic databases like **Google Scholar**, **ResearchGate**, or **IEEE Xplore**. These platforms often contain studies on:

- Digital transformation in art galleries.
- User experience design for gallery management systems.
- The impact of technology on art curation and sales.

2.2 Feasibility Study

The feasibility study assesses whether the **Art Gallery Management System** is practical and achievable within the given constraints. The study evaluates technical, operational, and economic feasibility.

Technical Feasibility:

- **Technology Availability:** The system uses PHP (backend) and MySQL (RDBMS), which are widely used, well-documented, and supported technologies. HTML, CSS, and JavaScript make the interface responsive and user-friendly.
- **Infrastructure Needs:** The system requires a web server (e.g., Apache or Nginx), which is easily accessible. It also supports operation across popular operating systems like Windows, Unix, and mobile platforms.
- **Scalability:** The system is scalable to handle increased user traffic, a growing inventory of art products, and more inquiries.

Operational Feasibility:

- **Ease of Use:** The system is designed to be user-friendly for both admin and users, requiring minimal technical expertise.
- **Reduction of Errors:** Automated data validation and centralized storage significantly reduce manual errors compared to the existing system.
- **User Engagement:** The system promotes user interaction by allowing them to explore art types, submit inquiries, and access gallery information seamlessly.
- **Administrative Efficiency:** Admin functionalities like dashboards, search tools, and inventory management enhance operational efficiency.

Economic Feasibility:

- **Development Costs:** The use of open-source technologies like PHP and MySQL minimizes development expenses.
- **Operational Costs:** Hosting and maintenance costs are moderate and can be optimized by using affordable hosting services.
- **Return on Investment (ROI):** The system improves operational efficiency, reduces labor costs, and enhances customer satisfaction, resulting in higher revenue for the gallery.

2.3 Objectives of Proposed System

The **Art Gallery Management System** aims to achieve the following objectives:

1. Modernize Gallery Operations:

- Transition from manual processes to a digital system to enhance efficiency and accuracy.

2. Centralized Data Management:

- Provide a secure and centralized platform to store and manage data such as art products, artist profiles, and user inquiries.

3. Simplify Administrative Tasks:

- Enable gallery administrators to effortlessly manage art types, mediums, inventory, inquiries, and website content.

4. Enhance User Experience:

- Offer users an intuitive interface to explore art, submit inquiries, and access gallery information.

5. Minimize Errors:

- Implement validation mechanisms to reduce errors during data entry and inquiry submission.

6. Improve Accessibility:

- Ensure the system is accessible across multiple devices and operating systems for both administrators and users.

7. Boost Scalability:

- Design the system to accommodate growth in inventory, inquiries, and user activity.

8. Strengthen Security:

- Protect sensitive data and ensure secure interactions between users and administrators.

9. Promote Interaction:

- Foster better communication and engagement between users, artists, and gallery administrators.

10. Enable Informed Decision-Making:

- Provide administrators with dashboards and analytics for better insight into gallery operations.

2.4 User of System

The **Art Gallery Management System** is designed to cater to two primary user groups, each with distinct roles and functionalities:

1. Administrators (Admin Users):

- **Role:** Responsible for managing the operations of the art gallery.
- **Key Functions:**
 1. Manage art types, mediums, and products.
 2. Oversee inquiries and ensure user responses are handled promptly.
 3. Update the gallery's informational pages (e.g., "About Us" and "Contact Us").
 4. Monitor key metrics through the dashboard, such as total products, artists, and inquiries.
 5. Perform searches for inquiries based on unique identifiers for better organization.
 6. Ensure the smooth operation of the system, including data updates and maintenance.
- **Impact:** Empowers gallery staff to efficiently manage and modernize gallery operations, reducing manual effort and errors.

Users (Visitors to the Gallery):

- **Role:** General users or visitors who interact with the system to explore and inquire about artworks.
- **Key Functions:**
 1. Access the home page for gallery details and offerings.
 2. Explore different art types and mediums.
 3. Submit inquiries about specific art pieces they are interested in.
 4. View information about the gallery through the "About Us" section.
 5. Access contact information for direct communication with gallery administrators.
- **Impact:** Provides visitors with an intuitive and engaging platform to explore the gallery and connect with administrators.

CHAPTER NO. 3

Analysis and Design

Analysis:

The present scenario offers manual data entry. A lot of time is wasted in creating the reports as well as maintaining them. In case, if any query arises to get the information about the client, the whole report is re-typed or Xeroxed. This seriously affects the authentication of the system. This Client Management System is totally outdated and involves high risk of ambiguity and redundancy.

Disadvantage of present system:

- **Not user friendly:** The present system not user friendly because data is not stored in structure and proper format.
- **Manual Control:** All report calculation is done manually so there is a chance of error.
- **Lots of paper work:** Visitors maintain in the register so lots of paper require storing details.
- **Time consuming**

Design Introduction:

Design is the first step in the development phase for any techniques and principles for the purpose of defining a device, a process or system in sufficient detail to permit its physical realization.

Once the software requirements have been analyzed and specified the software design involves three technical activities - design, coding, implementation and testing that are required to build and verify the software.

The design activities are of main importance in this phase, because in this activity, decisions ultimately affecting the success of the software implementation and its ease of maintenance are made. These decisions have the final bearing upon reliability and maintainability of the system. Design is the only way to accurately translate the customer's requirements into finished software or a system.

Design is the place where quality is fostered in development. Software design is a process through which requirements are translated into a representation of software. Software design is conducted in two steps. Preliminary design is concerned with the transformation of requirements into data

3.1 System Requirement

1. Functional Requirement:

These requirements specify the core functionalities that the **Art Gallery Management System** must perform:

1. Admin Module:

- Admin login and authentication.
- Manage artist profiles (add/update/delete).
- Manage art types and mediums (add/update/delete).
- Manage art products inventory (add/update/delete details).
- View, answer, and manage user inquiries.
- Search inquiries by inquiry number.
- Edit and update the "About Us" and "Contact Us" pages.
- View summarized statistics on the admin dashboard (e.g., total artists, inquiries, art types).

2. User Module:

- User-friendly navigation for exploring art products by type and medium.
- Submission of inquiries for art products.
- Access to "About Us" and "Contact Us" sections.
- Display of featured art products and gallery information.

3. Data Management:

- Store and retrieve data related to artists, art products, inquiries, and users in the database.
- Validation of user input to prevent invalid data entries.

4. System Security:

- Secure login system for admin users.
- Data encryption to protect sensitive information.

Non-Functional Requirements

These requirements define the quality attributes and constraints of the system:

1. Performance Requirements:

- The system should respond to user inquiries and admin actions within 2 seconds.
- The database should handle up to 10,000 records without performance degradation.

2. Usability Requirements:

- The interface must be intuitive and easy to navigate for both admins and users.
- Minimal technical expertise should be required to operate the system.

3. Reliability Requirements:

- The system should ensure 99.9% uptime.
- Backup mechanisms must be in place to recover data in case of failure.

4. Scalability Requirements:

- The system should support an increasing number of users, records, and inquiries as the gallery expands.

5. Accessibility Requirements:

- The application must be accessible on both desktops and mobile devices, ensuring compatibility with multiple operating systems (Windows, macOS, Unix, Android, iOS).

6. Security Requirements:

- Protect against unauthorized access through robust authentication mechanisms.
- Secure storage of sensitive data like inquiries and contact details.

7. Maintainability:

- The system should be designed with modularity to facilitate updates and debugging.
- Documentation must be provided for future maintenance.

3.2 Entity Relationship Diagram

The Entity-Relationship (ER) model was originally proposed by Peter in 1976 [Chen76] as a way to unify the network and relational database views. Simply stated the ER model is a conceptual data model that views the real world as entities and relationships. A basic component of the model is the Entity-Relationship diagram which is used to visually represent data objects. Since Chen wrote his paper the model has been extended and today it is commonly used for database design for the database designer, the utility of the ER model is:

- It maps well to the relational model. The constructs used in the ER model can easily be transformed into relational tables.
- It is simple and easy to understand with a minimum of training. Therefore, the model can be used by the database designer to communicate the design to the end user.
- In addition, the model can be used as a design plan by the database developer to implement a data model in specific database management software.

ER Notation

There is no standard for representing data objects in ER diagrams. Each modeling methodology uses its own notation. The original notation used by Chen is widely used in academics texts and journals but rarely seen in either CASE tools or publications by non-academics. Today, there are a number of notations used; among the more common are Bachman, crow's foot, and IDEFIX.

All notational styles represent entities as rectangular boxes and relationships as lines connecting boxes. Each style uses a special set of symbols to represent the cardinality of a connection. The notation used in this document is from Martin. The symbols used for the basic ER constructs are:

- **Entities** are represented by labeled rectangles. The label is the name of the entity. Entity names should be singular nouns.
- **Relationships** are represented by a solid line connecting two entities. The name of the relationship is written above the line. Relationship names should be verbs
- **Attributes**, when included, are listed inside the entity rectangle. Attributes which are identifiers are underlined. Attribute names should be singular nouns.
- **Cardinality** of many is represented by a line ending in a crow's foot. If the crow's foot is omitted, the cardinality is one.

3.3 Table Structure

Admin Table: (Table name is admin)

This store admin personal and login details.

No	Name	Type	Collation	Null	Default	Extra
1	ID	int(10)		No	None	AUTO_INCREMENT
2	AdminName	varchar(45)	latin1_swedish-ci	Yes	Null	
3	UserName	varchar(50)	latin1_swedish-ci	Yes	Null	
4	MobileNumber	bigint(10)		Yes	Null	
5	Email	varchar(120)	latin1_swedish-ci	Yes	Null	
6	Password	varchar(120)	latin1_swedish-ci	Yes	Null	
7	AdminRegdate	timestamp		Yes	current_timestamo()	

Indexes:

Keyname	Type	Unique	Packed	Column	Cardinality	Collation	Null
PRIMARY	BTREE	Yes	No	ID	1	A	No

Artist Table: (Table name is tblartist)

This store the detail of artist.

No	Name	Type	Collation	Null	Default	Extra
1	ID	int(10)		No	None	AUTO_INCREMENT
2	Name	varchar(250)	latin1_swedish_ci	Yes	Null	
3	MobileNumber	bigint(10)		Yes	Null	
4	Email	varchar(250)	latin1_swedish_ci	Yes	Null	
5	Education	mediumtext	latin1_swedish_ci	Yes	Null	
6	Award	mwduiumtext	latin1_swedish_ci	Yes	Null	
7	Profilepic	varchar(20)	latin1_swedish_ci	Yes	Null	
8	CreationDate	timestamp		Yes	current_timestamp()	

Indexes:

Keyname	Type	Unique	Packed	Column	Cardinality	Collation	Null
PRIMARY	BTREE	Yes	No	ID	8	A	No

Art Type Table: (Table name is tblarttype)

This store the art type.

No	Name	Type	Collation	Null	Default	Extra
1	ID	int(5)		No	None	AUTO_INCREMENT
2	ArtType	varchar(250)	latin1_swedish_ci	Yes	Null	
3	CreationDate	timestamp		Yes	current_timestamp()	

Indexes:

Keyname	Type	Unique	Packed	Column	Cardinality	Collation	Null
PRIMARY	BTREE	Yes	No	ID	7	A	No

Art Medium Table: (Table name is tblartmedium)

This store the art medium.

No	Name	Type	Collation	Null	Default	Extra
1	ID	int(5)		No	None	AUTO_INCREMENT
2	ArtMedium	varchar(250)	latin1_swedish_ci	Yes	Null	
3	CreationDate	timestamp		Yes	current_timestamp()	

Indexes:

Keyname	Type	Unique	Packed	Column	Cardinality	Collation	Null
PRIMARY	BTREE	Yes	No	ID	12	A	No

Art Product Table: (Table name is tblartproduct)

This table stores the data of facility art products.

No	Name	Type	Collation	Null	Default	Extra
1	ID	int(5)		No	None	AUTO_INCREMENT
2	Title	varchar(250)	latin1_swedish_ci	Yes	NULL	
3	Dimension	varchar(250)	latin1_swedish_ci	Yes	NULL	
4	Orientation	varchar(100)	latin1_swedish_ci	Yes	NULL	
5	Size	varchar(100)	latin1_swedish_ci	Yes	NULL	
6	Artist	int(5)		Yes	NULL	
7	ArtType	int(5)		Yes	NULL	
8	ArtMedium	int(5)		Yes	NULL	
9	SellingPricing	decimal(10.0)		Yes	NULL	
10	Description	mediumtext	latin1_swedish_ci	Yes	NULL	
11	Image	varchar(250)	latin1_swedish_ci	Yes	NULL	
12	Image1	varchar(250)	latin1_swedish_ci	Yes	NULL	
13	Image2	varchar(250)	latin1_swedish_ci	Yes	NULL	
14	Image3	varchar(250)	latin1_swedish_ci	Yes	NULL	
15	Image4	varchar(250)	latin1_swedish_ci	Yes	NULL	
16	RefNum	int(10)		Yes	NULL	
17	CreationDate	timestamp		Yes	current_timestamp()	

Indexes:

Keyname	Type	Unique	Packed	Column	Cardinality	Collation	Null
PRIMARY	BTREE	Yes	No	ID	4	A	No

Enquiry Table: (Table name is tblequiry)

This table stores the data of enquiry which is raise by users.

No	Name	Type	Collation	Null	Default	Extra
1	ID	int(10)		No	None	AUTO_INCREMENT
2	EnquiryNumber	varchar(120)	latin1_swedish_ci	No	None	
3	Artpdid	int(9)		Yes	NULL	
4	FullName	varchar(120)	latin1_swedish_ci	Yes	NULL	
5	Email	varchar(250)	latin1_swedish_ci	Yes	NULL	
6	MobileNumber	bigint(10)		Yes	NULL	
7	Message	varchar(250)	latin1_swedish_ci	Yes	NULL	
8	EnquiryDate	timestamp		Yes	current_timestamp()	
9	Status	varchar(10)	latin1_swedish_ci	Yes	NULL	
10	AdminRemark	varchar(200)	latin1_swedish_ci	No	None	
11	AdminRemrkdate	timestamp		Yes	NULL	

Indexes:

Keyname	Type	Unique	Packed	Column	Cardinality	Collation	Null
PRIMARY	BTREE	Yes	No	ID	6	A	No
CaedId	BTREE	NO	NO	Artpdid	6	A	

Page Table: (Table name is tblpage)

This table stores the about us and contact us details of hotels.

No	Name	Type	Collation	Null	Default	Extra
1	ID	int(10)		No	None	AUTO_INCREMENT
2	PageType	varchar(200)	latin1_swedish_ci	Yes	NULL	
3	PageTitle	mediumtext	latin1_swedish_ci	Yes	NULL	
4	PageDescription	mediumtext	latin1_swedish_ci	Yes	NULL	
5	Email	varchar(200)	latin1_swedish_ci	Yes	NULL	
6	MobileNumber	Bigint(10)		Yes	NULL	
7	UpdationDate	date		Yes	NULL	
8	Timing	varchar(200)	latin1_swedish_ci	No	None	

Indexes:

Keyname	Type	Unique	Packed	Column	Cardinality	Collation	Null
PRIMARY	BTREE	Yes	No	ID	2	A	No

3.4 Use Case Diagrams

Actor: A coherent set of roles that users of use cases play when interacting with the use cases.

Use case: A description of sequence of actions, including variants, that a system performs that yields an observable result of value of an actor.

UML stands for Unified Modeling Language. UML is a language for specifying, visualizing and documenting the system. This is the step while developing any product after analysis. The goal from this is to produce a model of the entities involved in the project which later need to be built. The representation of the entities that are to be used in the product being developed need to be designed.

USECASE DIAGRAMS:

Use case diagrams model behavior within a system and helps the developers understand of what the user require. The stick man represents what's called an actor.

Use case diagram can be useful for getting an overall view of the system and clarifying who can do and more importantly what they can't do.

Use case diagram consists of use cases and actors and shows the interaction between the use case and actors.

- The purpose is to show the interactions between the use case and actor.
- To represent the system requirements from user's perspective.
- An actor could be the end-user of the system or an external system.

USECASE DIAGRAM: A Use case is a description of set of sequence of actions. Graphically it is rendered as an ellipse with solid line including only its name. Use case diagram is a behavioral diagram that shows a set of use cases and actors and their relationship. It is an association between the use cases and actors. An actor represents a real-world object. Primary Actor – Sender, Secondary Actor Receiver.

Admin use case diagram:

User use case Diagram:

3.5 Class Diagram:

A description of set of objects that share the same attributes operations, relationships, and semantics.

3.6 Activity Diagram

3.7 Deployment Diagram

3.8 Module Hierarchy Diagram

ENG

CHAPTER NO. 4

CODING

4.1 Algorithms

User Authentication Algorithm (Admin/User Login)

- Input: Username and password.
- Process:
 1. Validate input fields.
 2. Query the database to check if the provided credentials match stored records.
 3. If a match is found, grant access to the appropriate module (admin/user).
 4. If no match is found, display an error message.
- Output: Access granted or denied.

Enquiry Submission Algorithm

- Input: Enquiry details from the user.
- Process:
 1. Validate the enquiry form fields (e.g., no empty fields, valid formats).
 2. Save the enquiry details into the database.
 3. Send a confirmation message to the user (optional).
- Output: Enquiry stored in the database.

Art Product Management Algorithm (Admin)

- Input: Add, update, or delete art product information.
- Process:
 1. For adding: Validate input data and save it to the database.
 2. For updating: Locate the existing product record by ID, modify details, and save changes.
 3. For deleting: Locate the record by ID and remove it from the database.
- Output: Database updated with changes.

Search Algorithm for Enquiries

- Input: Enquiry number.
- Process:
 1. Take the enquiry number as input.
 2. Search the database for a matching record.
 3. If found, display the enquiry details; if not, return an error message.

- Output: Enquiry details displayed or “not found” message.

Data Dashboard Algorithm (Admin)

- Input: None (or filters like date range).
- Process:
 1. Fetch the total counts of artists, art types, art mediums, enquiries, and art products from the database.
 2. Display the summarized data on the admin dashboard.
- Output: Dashboard statistics.

CHAPTER NO. 5

TESTING

5.1 Test Strategy

Designing an effective test strategy for your **Art Gallery Management System** ensures that all functionalities work as intended and the system is robust, user-friendly, and error-free. Here's a proposed **test strategy**:

Objectives

- Ensure the system meets all functional and non-functional requirements.
- Validate the correctness of data entry and retrieval processes.
- Verify the system's usability, security, and performance.

Testing Phases

a. Unit Testing

- Test individual modules (e.g., login, art product management) to ensure each works independently.
- Example: Verify if the "Add Art Product" feature correctly inserts data into the database.

b. Integration Testing

- Test the interaction between modules to ensure seamless data flow.
- Example: Check if user enquiries are saved and can be viewed in the admin's enquiry management section.

c. System Testing

- Perform end-to-end testing of the entire application.
- Example: A user sends an enquiry; verify the admin receives it and can respond appropriately.

d. User Acceptance Testing (UAT)

- Have real users (or a client representative) test the system to ensure it meets their needs.
- Focus on user-friendliness, navigation, and proper functionality.

3. Types of Testing

a. Functional Testing

- Validate all core functions (e.g., login, CRUD operations for art types, art mediums, and products).
- Ensure data validation mechanisms work (e.g., preventing invalid data entry).

b. Performance Testing

- Test how the application performs under heavy load.
- Example: Simulate multiple users accessing the system to ensure stability.

c. Security Testing

- Ensure the system is protected from unauthorized access and common vulnerabilities (e.g., SQL injection, XSS).
- Example: Test if admin/user login is secure and data is encrypted.

d. Usability Testing

- Ensure the system is intuitive and easy to use for admins and users.
- Example: Verify that users can easily browse art products and send enquiries.

e. Database Testing

- Validate data integrity and database operations.
- Example: Ensure that deleting an art type doesn't leave orphaned records in related tables.

Tools

- Use tools like Selenium, Postman, or JMeter for automated testing, API testing, and performance testing.
- Use manual testing for exploratory and UAT testing.

5.2 Unit Test Plan

Unit Test Scope

This Unit Test Plan includes testing of:

- Backend functions (PHP)
- Form validations
- Database interactions (CRUD operations)
- Input/output processing

Component/Module	Functionality to be Tested	Test Scope	In Scope / Out of Scope
Login Module	- Admin login validation - Session creation - Error handling	Verify input validation, correct redirection, and session variables	✓ In Scope
Art Type Module	- Add, Update, Delete art types	Test form submissions, database insert/update/delete operations	✓ In Scope
Art Medium Module	- Manage different art mediums	Ensure mediums are stored, displayed, and updated correctly	✓ In Scope
Art Product Module	- Add/edit/delete art products - File/image upload	Verify all product-related fields, media uploads, and DB integration	✓ In Scope
Dashboard Module	- Count statistics display	Unit test individual SQL count queries for accuracy	✓ In Scope
Enquiry Module	- Submit, fetch, and manage enquiries	Validate input forms and admin view for enquiries	✓ In Scope
Search Enquiry	- Search by enquiry number	Ensure search function returns correct result or proper “not found” messages	✓ In Scope
Page Management	- Update content for About/Contact pages	Test if content is saved and reflects correctly in frontend	✓ In Scope
Validation Scripts	- Form validation (JS/PHP)	Verify required fields, formats (email, phone), and alerts	✓ In Scope
Frontend Pages	- UI rendering of About, Contact, Art Type, etc.	Basic rendering check; deep UI testing not included in unit testing	✗ Out of Scope
Database Layer	- Direct SQL query testing	Direct DB stress or integration testing is not part of unit testing	✗ Out of Scope
Security Handling	- Session timeouts, restricted pages	Partially tested via session-related functions	✓ In Scope (limited)

5.3 Acceptance Test Plan

Test Case ID	Functionality	Test Description	Expected Result	Pass/Fail
ATC001	Admin Login	Admin logs in with valid credentials	Admin redirected to dashboard	
ATC002	Dashboard Display	View total counts of artists, enquiries, etc.	Dashboard shows accurate data summary	
ATC003	Art Type Management	Admin adds/edits/deletes an art type	Art type is added, updated, or removed successfully	
ATC004	Art Product Management	Admin manages art products	Product added/updated/deleted and visible in product list	
ATC005	User Art View by Type	User browses artworks based on type	Related artworks are displayed to the user	
ATC006	Enquiry Submission	User submits an enquiry for a product	Enquiry saved and visible to admin	
ATC007	Static Page Management	Admin updates About/Contact pages	Updated content appears correctly on the frontend	
ATC008	Enquiry Search	Admin searches for a specific enquiry	Matching enquiry appears with correct details	
ATC009	Unauthorized Admin Access	User tries to access admin page without login	Redirected to login page or shown "Access Denied" message	
ATC010	Form Validation	Submit forms with invalid/missing data	Appropriate validation messages are displayed	

5.4 Test Case

Test Case ID	Module	Functionality	Test Description	Input	Expected Result	Status
TC001	Login (Admin)	Admin Login	Verify admin can log in with valid credentials	Username: komal Password: komal123	Redirect to admin dashboard	Pass/Fail
TC002	Login (Admin)	Invalid Login	Verify error is shown for wrong credentials	Username: admin Password: wrong	Show "Invalid Credentials" message	Pass/Fail
TC003	Admin Dashboard	View Summary	Verify dashboard displays counts correctly	—	Display total artists, enquiries, art types, products	Pass/Fail
TC004	Art Type	Add Art Type	Check if admin can add a new art type	Art Type: Abstract	Art type added successfully	Pass/Fail
TC005	Art Type	Delete Art Type	Check if admin can delete an art type	Click on delete icon	Art type deleted successfully	Pass/Fail
TC006	Art Medium	Update Art Medium	Update details of an existing art medium	Medium: Oil → Acrylic	Medium updated successfully	Pass/Fail
TC007	Art Product	Add Art Product	Add a new artwork	Title, Artist, Type, Price	Product added and visible under product list	Pass/Fail
TC008	Enquiry	View Enquiries	View all user enquiries	—	List of enquiries shown	Pass/Fail
TC009	Enquiry Search	Search by Enquiry No.	Search for a specific enquiry	Enquiry No: ENQ123	Enquiry details displayed	Pass/Fail
TC010	Pages	Update About Us Page	Update text on About Us page	New content	Page updated and reflects on user side	Pass/Fail
TC011	User Module	View Art Types	User selects art type to view related products	Click on "Abstract"	All artworks under "Abstract" displayed	Pass/Fail

Test Case ID	Module	Functionality	Test Description	Input	Expected Result	Status
TC012	User Module	Send Enquiry	User sends enquiry for a product	Name, Email, Message	Enquiry submitted, confirmation shown	Pass/Fail
TC013	User Module	View Contact Page	User opens contact page	—	Contact info displayed	Pass/Fail
TC014	Validation	Empty Enquiry Form	Try submitting enquiry form without filling fields	Empty fields	Error message: "All fields are required"	Pass/Fail
TC015	Security	Direct URL access (admin)	User tries to access admin panel via URL	/admin/dashboard.php	Redirect to login page	Pass/Fail

CHAPTER NO. 6

LIMITATION OF PROPOSED SYSTEM

Limitations of the Art Gallery Management System

Although the **Art Gallery Management System** offers numerous advantages, such as streamlining the management of art products, artist details, and user enquiries, it also has certain limitations that should be considered for improvement or further development. Below are the possible limitations of the system:

Dependency on Internet Connection

- **Limitation:** The system is web-based, which means it requires a stable internet connection to operate. Users who do not have reliable internet access may face difficulties in accessing the system.
- **Impact:** Users in regions with poor internet connectivity may experience slow performance or be unable to access the system altogether.

Security Concerns

- **Limitation:** As a web-based system, the **Art Gallery Management System** is vulnerable to security risks such as hacking, SQL injection, and unauthorized access, especially if proper encryption and security measures are not implemented.
- **Impact:** Sensitive user and administrative data, including passwords, personal details, and artwork information, could be compromised if the system is not adequately secured.

Limited User Roles and Permissions

- **Limitation:** The system might have a basic user management feature with only two roles (Admin and User). It may not allow for granular user access levels or permissions.
- **Impact:** This limitation could hinder flexibility in larger or more complex organizations that require various levels of access for different roles (e.g., curators, gallery staff, etc.).

CHAPTER NO. 7

PROPOSED ENHANCEMENT

Proposed Enhancements for the Art Gallery Management System

While the **Art Gallery Management System** offers a range of features for streamlining gallery operations, several enhancements can be implemented to improve user experience, system functionality, scalability, and security. Below are the proposed enhancements for the system:

➤ **Mobile Application Development**

- **Enhancement:** Develop a **mobile application** for both Android and iOS platforms.
- **Benefit:** This will allow users and administrators to access the system from their smartphones or tablets, providing greater convenience, accessibility, and flexibility.
- **Impact:** Users can browse artworks, make enquiries, and admins can manage the system on the go, improving user engagement and operational efficiency.

➤ **Advanced Art Product Display Features**

- **Enhancement:** Integrate **high-resolution images**, **360-degree views**, and **augmented reality (AR)** features for art products.
- **Benefit:** Users will be able to view artworks in greater detail, which enhances their browsing experience and can lead to increased engagement and conversions.
- **Impact:** The gallery will provide a more immersive experience, allowing users to appreciate the fine details of art products, even online.

➤ **Enhanced Search and Filtering Options**

- **Enhancement:** Introduce **advanced search filters**, such as searching by price range, size, color, artist's location, or creation year.
- **Benefit:** Users can more easily find specific pieces of art based on their preferences, improving the usability of the system.
- **Impact:** This will help potential buyers or interested users find exactly what they are looking for, improving the chances of an enquiry or sale.

CHAPTER NO. 8

CONCLUSION

CONCLUSION

This Application provides a computerized and automated version of Art Gallery Management System which will benefit the hotel companies and their users.

It makes entire process online and can generate reports. It has a facility of user's login where users can view their booking details.

The Application was designed in such a way that future changes can be done easily. The following conclusions can be deduced from the development of the project.

- Automation of the entire system improves the productivity.
- It provides a friendly graphical user interface which proves to be better when compared to the existing system.
- It gives appropriate access to the authorized users depending on their permissions.
- It effectively overcomes the delay in communications.
- Updating of information becomes so easier.
- System security, data security and reliability are the striking features.
- The System has adequate scope for modification in future if it is necessary.
